## How should we catalog argument mining datasets?

During the creation of the second edition of the book *Argument Mining* (due out in August), it became apparent that a resource is needed for collecting and maintaining argument mining datasets in the long run.

We present **AMResources**, an online catalog that organizes argument mining datasets by task, and captures relationships among datasets, releases, and papers. AMResources currently contains the datasets described in the “Selected Corpora” appendix of *Argument Mining* 2<sup>nd</sup> edition.

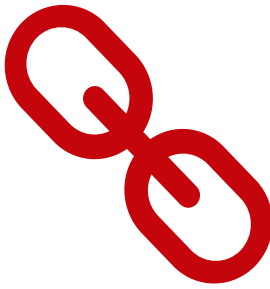

## What we wanted

A **persistent, updatable resource** that highlights argument mining datasets and **documents dataset properties** we propose are valuable, such as inter-annotator agreement.

For us, the importance of an argument mining dataset lies in **which argument mining tasks it supports**.

Additionally, we noticed that **many argument mining datasets are related to each other**, and we wanted to **capture these relationships**.

## Categorization by task

We group tasks by how they treat argumentative discourse units (ADUs).

**ADU-concerned tasks** involve the identification and analysis of ADUs

- They form a classic argument mining pipeline.
- Example: Argument Component Segmentation/Classification

**ADU-agnostic tasks** are not dependent on ADUs

- These tasks typically process whole arguments.
- Example: Argument Type Identification

## Dataset relationships

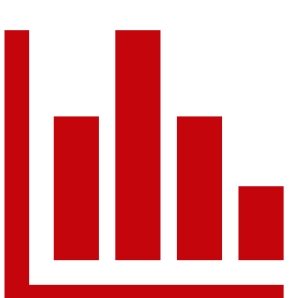

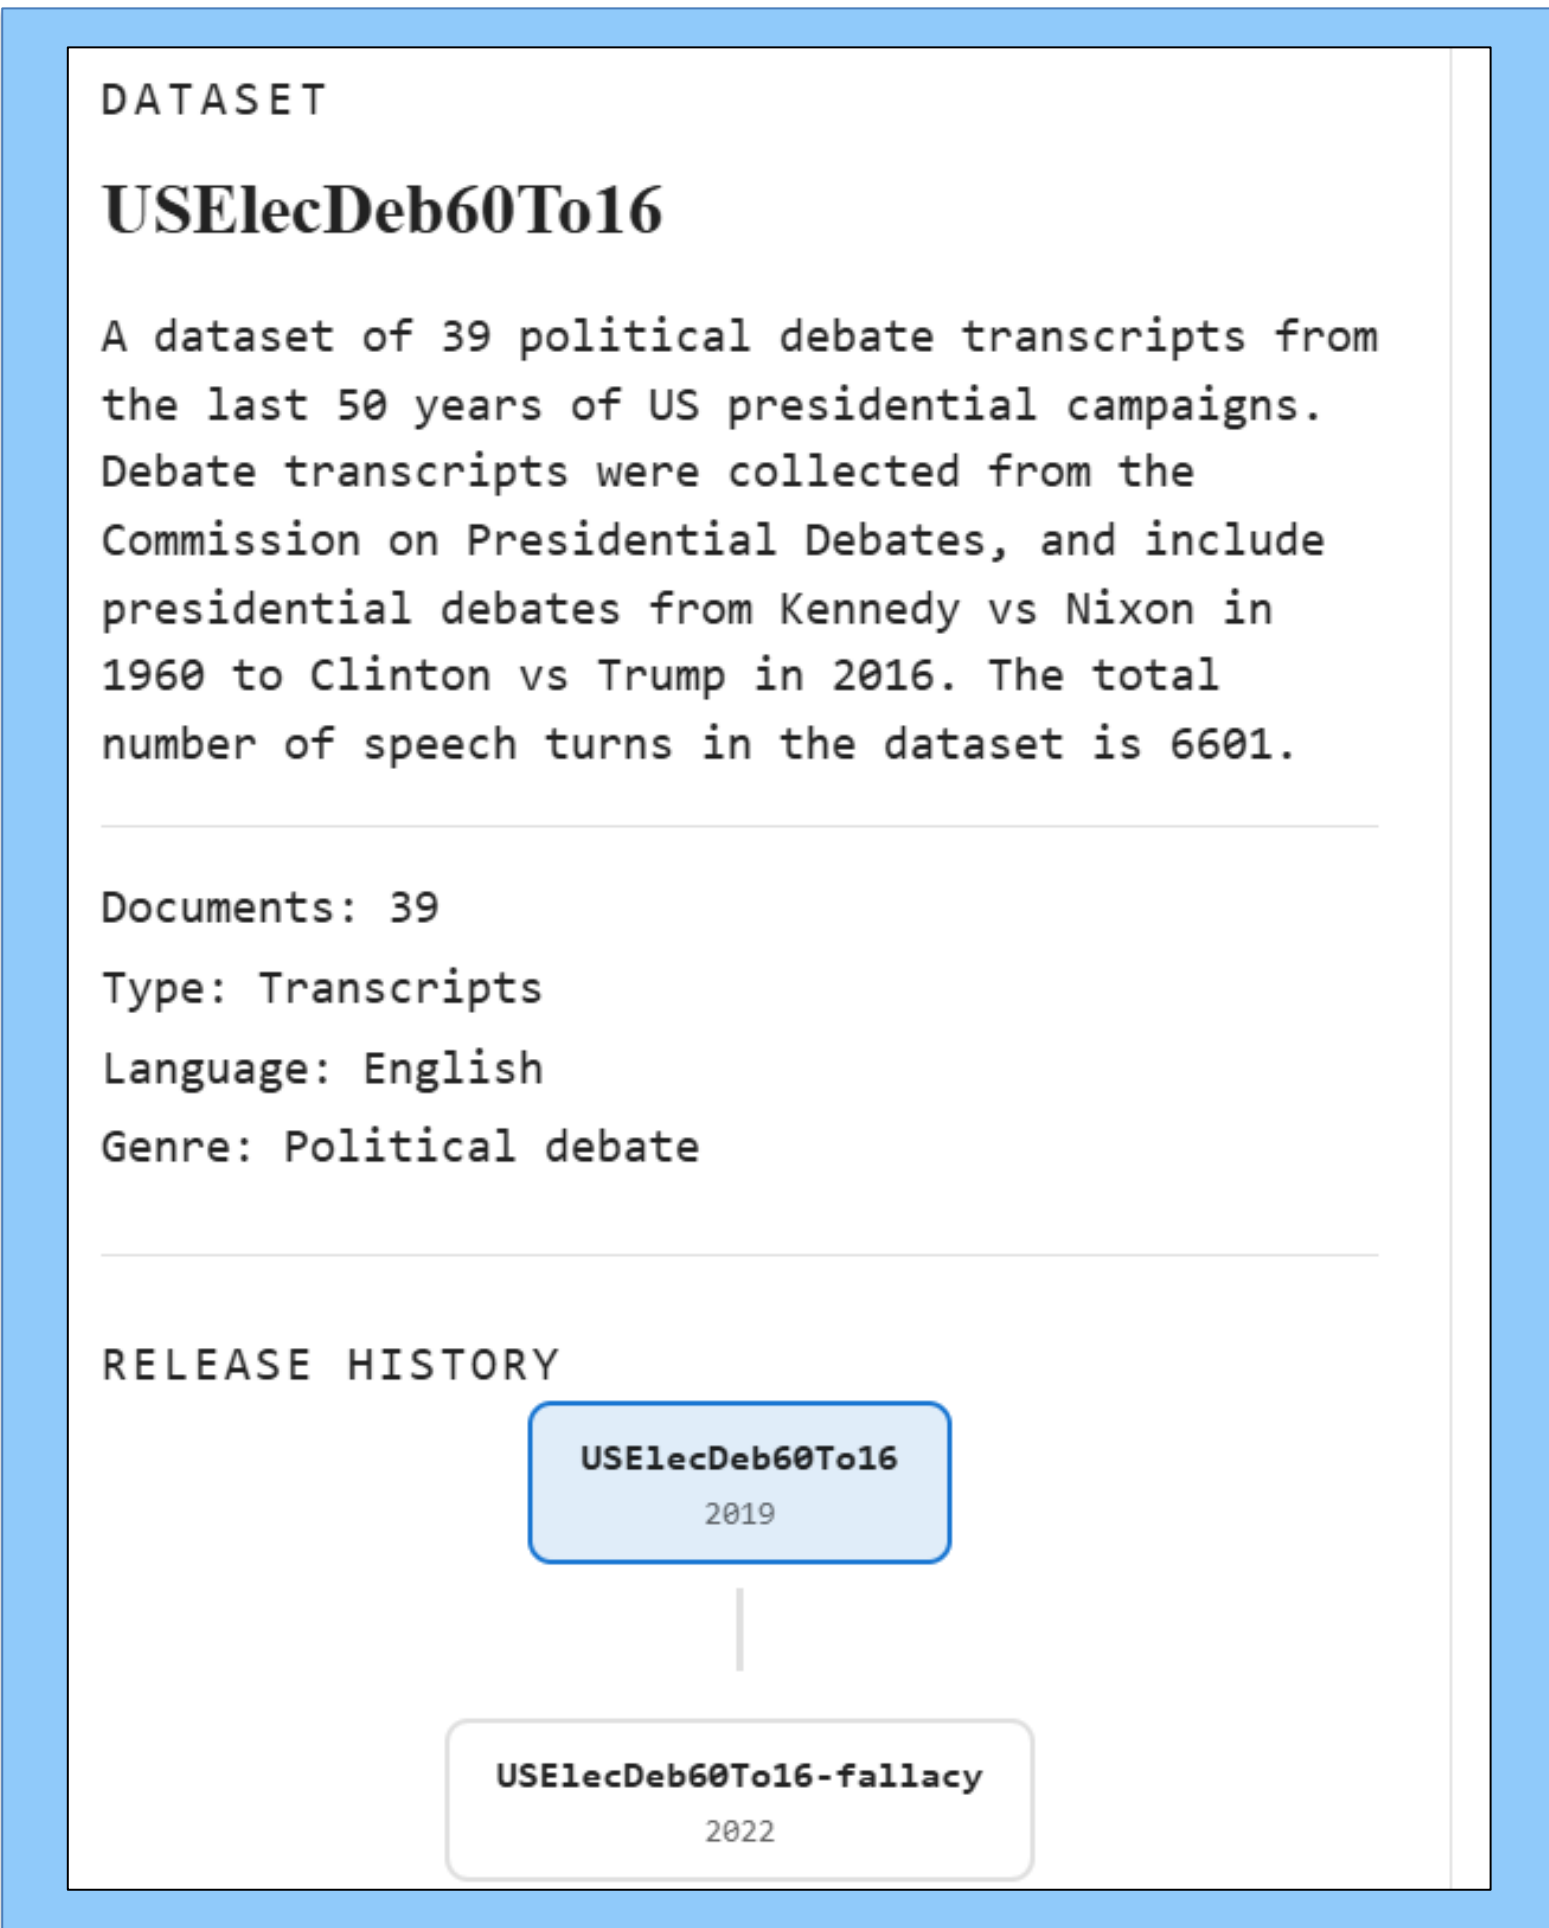

We aim to capture instances where datasets are reannotated:

**(Source) Dataset:** initial release of a dataset

**Release:** datasets which are a subset of another release

**Extension:** datasets which contain a subset of a source dataset and contain additional items

AMResources highlights the release history for a given source dataset (right).

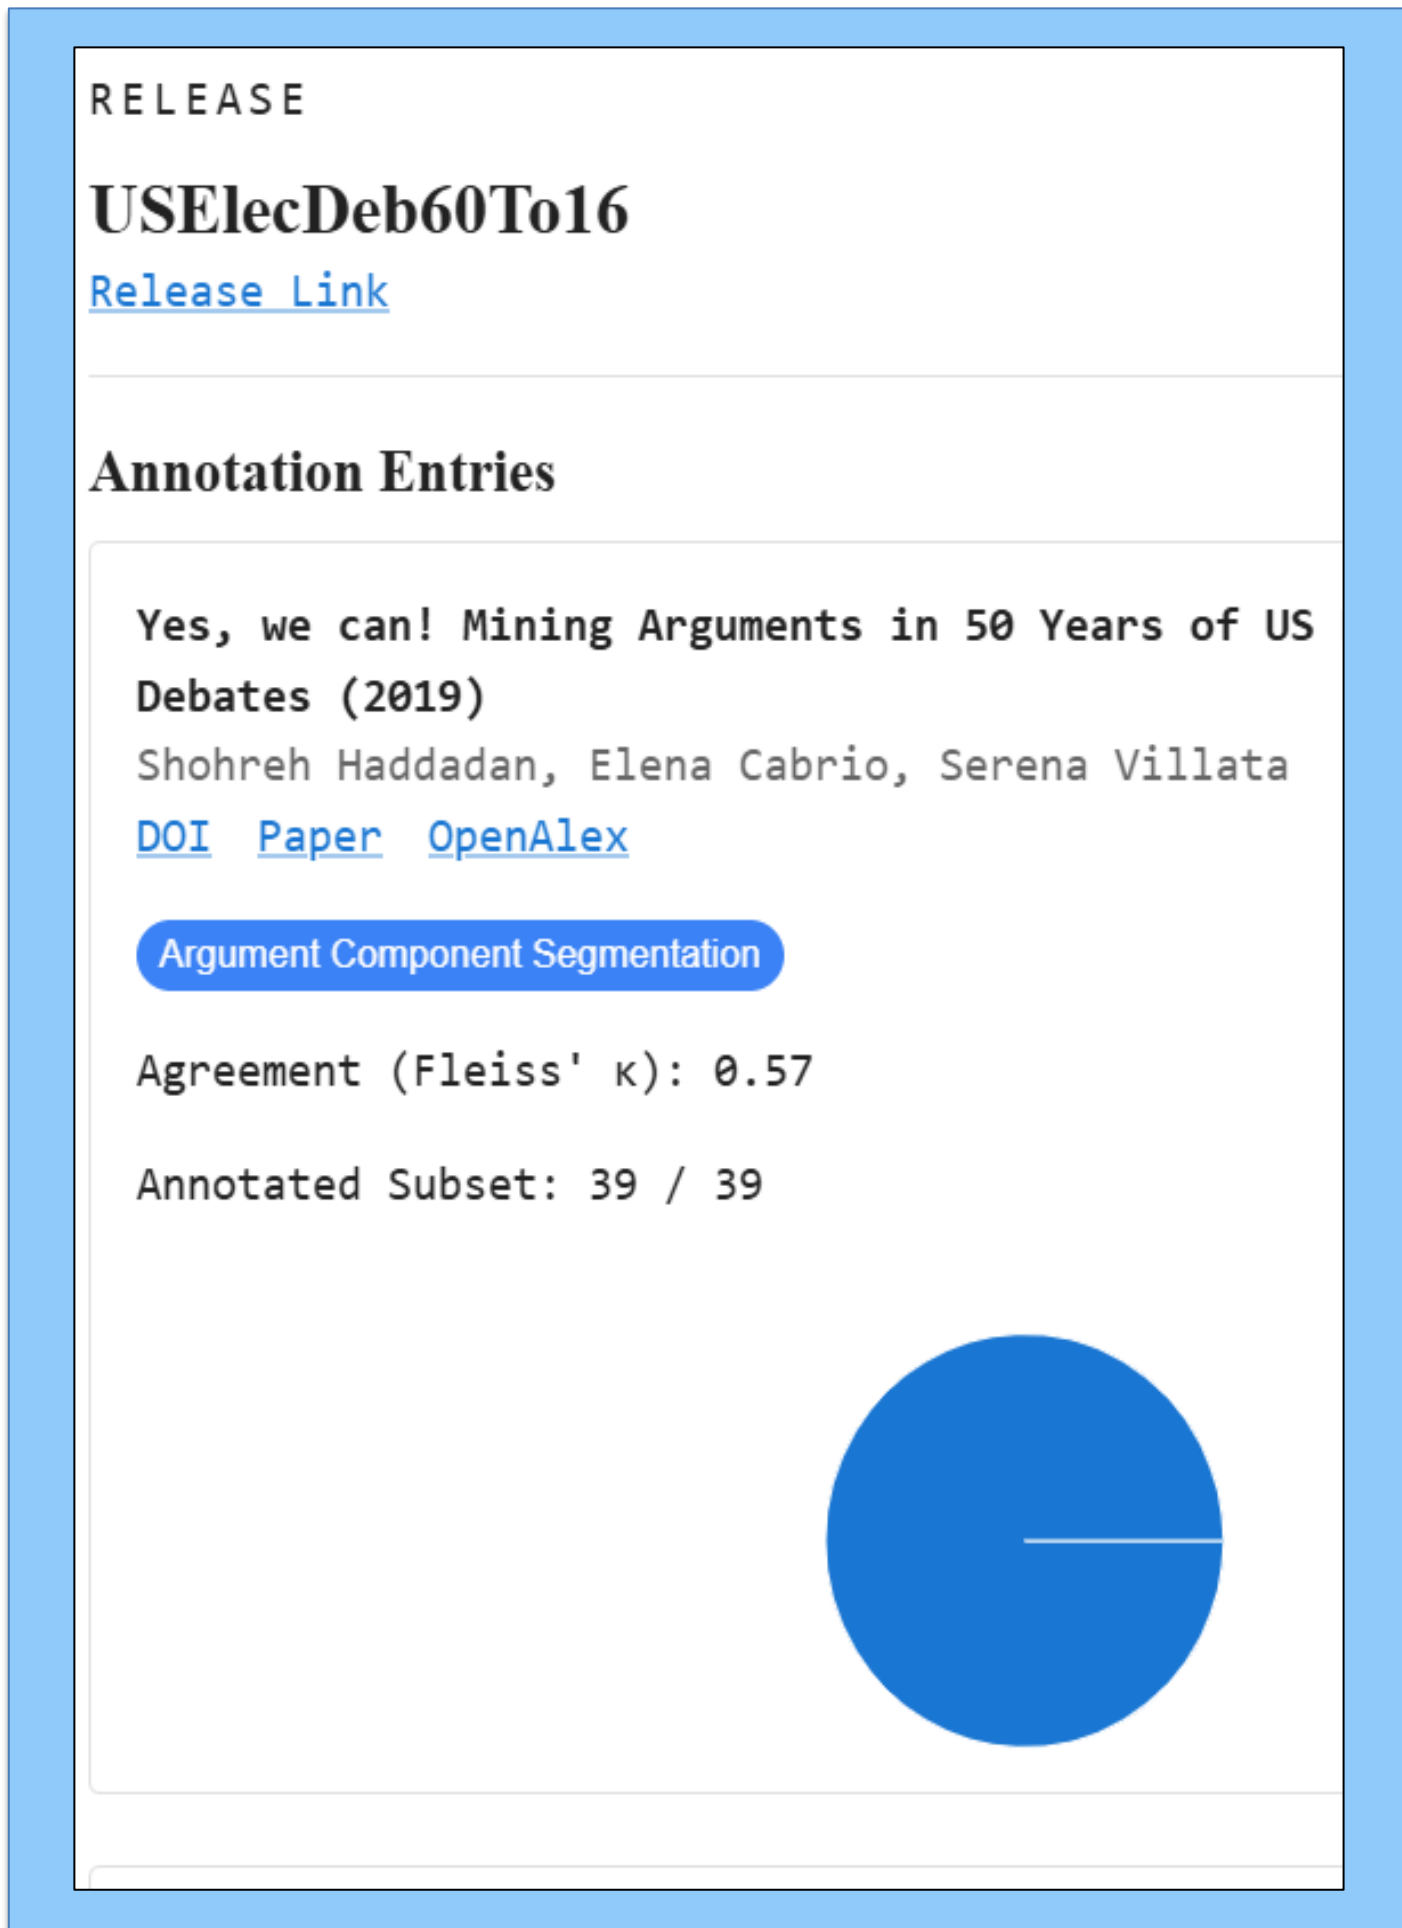

## Dataset properties

For a selected **release** (which could be the source dataset) we provide details on each annotation task performed on the dataset.

We document inter-annotator agreement scores.

Additionally, we note which subset of the source dataset was annotated in the annotation task (piechart on the right).

## We welcome contributions!

If you have a dataset you would like to appear in AMResources, please raise an issue on the GitHub repository.
